

ABSTRACT

The present invention can provide a navigation device, method, and program for outputting information on a desired type of element facility, which exists on an expressway, with simple operation during driving on the expressway.

in the present embodiment a display mode such as a map not only includes a general road display mode which displays facilities such as general roads, family restaurants, and convenience stores, but also includes a highway mode. The highway mode is a predetermined expressway display mode which displays expressways and facilities on the expressways, and combines a simple map focusing mainly on expressways so that the expressways can be easily recognized, and a moving image. The searching and outputting portion 45 searches for a predetermined number of facility information items of a desired type of element facility from the road map data in accordance with a provided predetermined operation, and outputs the information items when the present location is above-described highway mode, the element facility existing ahead on the expressway.
